

Ray Schmidt is a beautiful person. He is living proof of what love is all about. His ceaseless efforts and untiring devotion have produced a bonus for PPNF that is priceless. He has unearthed from the archives of different libraries many research studies, some of which are one-of-a-kind. He has painstakingly copied them and brought them to us personally. Herewith, in his own words, is his story.....

PRICE RESEARCH REDISCOVERED

The prolific Dr. Weston A. Price produced a voluminous amount of research in the twenties and thirties during which time he reported his studies in many medical and dental journals. A goodly segment of these works has just been literally "dug out" of different libraries across the country. The most significant material will now be copied and made available by means of reprints. These reports are most valuable additions to the PPNF material now at hand. My thanks go to Tom Shiek and his helpers at U.S.C. Dental Library as well as the Interlibrary Loan Service for making this material available.

I have been helping the Foundation because I recognize that the Price-Pottenger material was perhaps the most profound, direct and complete study ever done on man and his diet. I have a continuing inner urge to do all I can to assist in making available the incredible work of Dr. W. A. Price to all people and institutions. With this in mind, I have studied and selected for reprint the most important research papers newly recovered. They are really exciting and so profound as to be simple.

Dr. Price was a visionary who was way ahead of his time. His insight was pure because it was

based on Our Good Mother, the Earth. He wrote scientifically about pollution in the atmosphere and how it interferes with the different full spectrum rays from the sun. This has a direct deleterious effect on man, plants and animals. He realized that the soil must be rebuilt organically in order to produce healthy and nutritious crops which in turn would provide essential factors to maintain health and immunity in both animal and man. This great man showed us how to stop degeneration as early as the thirties.

Presently, I am in the process of categorizing his thousands of slides and putting them in order. I never tire of observing his work and am constantly awed by the deep, profound and prolific nature of this man. Those of us who work with the Foundation now hope to organize and make available slides, films, reprints and complete lessons on how to gain health and immunity by regeneration. Our goal is one day to see a HAPPY AND HEALTHY AND MORAL CIVILIZATION living close to soil that is rich and organic and eating natural food that is whole, fresh and free from chemicals.

I truly believe that Dr. Price is a holy man because he perceived the Truth. Surely, it was love that urged him on through his work in filming, researching and writing so that he could help combat the degeneration taking place so rapidly throughout the world. I believe his concept of regeneration is the hope of our civilization. I hope that a rapidly growing number of people will return to the natural ways of cultivating the soil and eating only food that is chemical free, whole, natural and unprocessed.

Truly, this is the key to the regeneration of man - both physically and mentally and spiritually.
